

M.Sc. (Part-II) (Chemistry) CBCS Pattern Semester-IV
PSCHT13 - Paper-XIII : Spectroscopy

P. Pages : 3

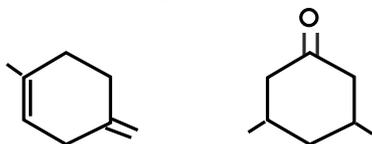

Time : Three Hours

GUG/W/23/11448

Max. Marks : 80

1. a) Explain Fisher-Woodward rules with suitable examples and calculate values of λ_{\max} - 8
from the following molecules.

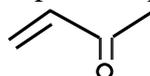

- b) What is photoelectron spectroscopy. Explain its application related to the structure determination. 8

OR

- c) Write note on Auger electron spectroscopy. 4

- d) Explain all possible electronic transition in a given molecule 4

with suitable diagram.

- e) How will you differentiate between structural isomers on the basis of UV-Vis spectroscopy? 4

- f) How will you get chemical information from ESCA? 4

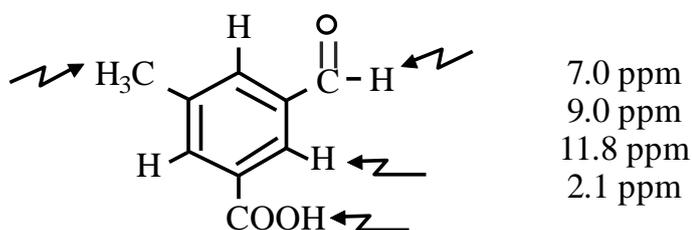

2. a) Explain the principle of NMR spectroscopy & conditions for Nuclei to be NMR active and inactive. 8

- b) What is coupling constant? How Karplus equation is effective for coupling constant with dihedral angle. 8

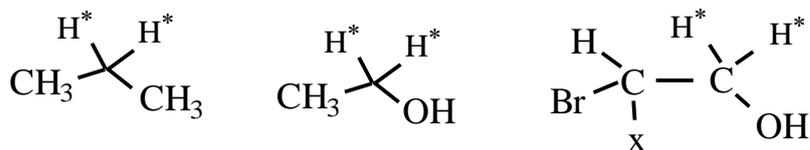

OR

- c) Differentiate between first order and second order spectra. 4

- d) Do correct pairing of chemical shift values with protons C hydrogen atom. 4

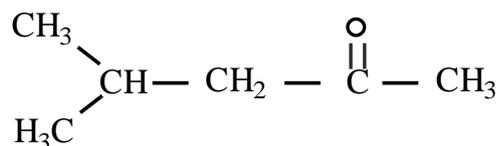

- e) Identify homotopic, enantiotopic and diastereotopic protons in the given molecules. 4

- f) Determine the structure of given molecule from NMR data M.F. C_3H_6O 4

1H $\delta = 9.2$ ppm t
 2H $\delta = 2.3$ ppm multiplate
 3H $\delta = 1.1$ ppm triplet

3. a) Explain DEPT (Distortionless enhancement by polarization transfer) in a given molecule at 45, 90 and 135. 8

- b) Explain following terms with suitable example. 8
 i) Nuclear Overhauser effect
 ii) Nuclear quadrupole resonance

OR

- c) What is FT-NMR-technique and explain its advantages. 4

- d) Describe COSY. NMR spectroscopy. 4

- e) Elucidate the structure of organic molecule from given NMR data. 4
 M. F. = $C_6H_{14}O$, $\delta = 1.1$ ppm, doublet, 12H
 $\delta = 3.2$ ppm septate 2H

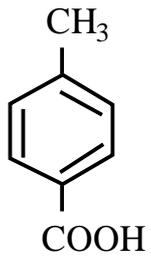

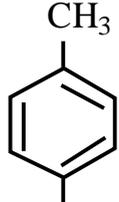

- f) Pair the splitting pattern from the following. 4

- | | |
|--------------------|----------------------|
| i) $CH_3 - CH_2 -$ | a) doublet septate |
| ii) $CH_3 - CH -$ | b) doublet quartet |
| iii) $-CH - CH -$ | c) triplet quartet |
| iv) | d) doublet - doublet |

4. a) Explain Ramchandram Plot to determine the structure of proteins. 8

- b) Explain Bragg's method for determining the crystal structure of solid. 8

OR

- c) Explain Wierl. Equation of electron diffraction technique. 4
- d) Explain Laue method for the x-rays analysis. 4
- e) A first order reflection from the (111) planes of a cubic crystal was observed of a glancing angle 11.2° using Cu-x-ray radiation. Calculate the length of unit cell. 4
- f) Differentiate between electron and neutron diffraction in brief. 4
5. a) Write note on hypsochromic shift. 2
- b) Which transition from the following required lower amount of energy. 2
 $\sigma - \sigma^* \quad \pi \rightarrow \pi^* \quad \pi \rightarrow \pi^*$
- c) How many types of protons present in the given molecule & indicate their chemical shift value. 2
- 
- d) Which protons from the following molecules are most shielding and desheided. 2
- 
- e) Chemical shift of proton is 1.2 ppm convert this value in H_z . Instrumental frequency is $60MH_z$ 2
- f) Which carbon signal or peak disappear in DEPT spectrum at 45° in proton decoupled spectrum. 2
- g) Give Braggs equation and name the term involve in the equation. 2
- h) What is neutron diffraction? 2
